CONFIDENTIAL

PERSONNEL DATA

Legal Name	: Hoàng Nam Phong
Code Name	: Fonzi
Age	: 28
Height	: 5'9" (175 cm)
Weight	: Unable to Determine
Eye Color	: Dark Brown
Hair Color	: Reddish Brown (Dyed)
Nationality	: Vietnamese
Birthplace	: Vietnam
Religion	: Đạo Dụ (Not formally recognized)
Alignment	: Vought International
Status	: Active

POWER PROFILE

Power Designation	: Tactical Influence
Classification	: Cognitive Enhancement
Manifestation Status	: Stable
Primary Effect	: Behavioral Influence

CORPORATE ASSIGNMENT

Position	: Tactical Operations Specialist
Division	: Tactical Operations
Department	: Psychological Operations
Primary Function	: Influence & Persuasion

PRIMARY ABILITY: TACTICAL INFLUENCE

Demonstrates advanced proficiency in influencing behavioral outcomes through conversational pressure, strategic reasoning, and adaptive persuasion. Subject routinely identifies psychological leverage points and applies verbal techniques to redirect decisions toward preferred outcomes.

Behavioral influence increases significantly when the subject is permitted to establish conversational momentum.

SECONDARY CAPABILITIES

One Last Game

Demonstrates exceptional persistence in extending recreational and operational activities beyond their scheduled completion. The subject's definition of "one last game" remains inconsistent with conventional timekeeping standards.

Tactical Foresight

Anticipates multiple conversational outcomes and adjusts strategy accordingly, allowing the subject to identify likely objections before they are raised. Particularly effective when the subject has already decided what outcome he want.

Resource Management

Allocates in-game resources under highly variable probability conditions, demonstrating resilience across both favorable and unfavorable outcomes.

Rate-Up Invocation

Performs a standardized verbal ritual prior to high-value randomized acquisitions, allegedly increasing the probability of favourable outcomes. No measurable effect has been confirmed; Subject continues to insist otherwise.

WEAKNESSES / LIMITATIONS

Time Management

Demonstrates persistent difficulty distinguishing short-duration activities from extended operational commitments. Subject's interpretation of "five minutes" remains substantially longer than standard temporal measurements.

Decision Finality

Frequently declares decisions as final before subsequently revising them following additional information, analysis, or external circumstances. Repeated use of the term "final" has been deemed operationally unreliable.

Opponent Irrationality

Performance may decline when confronted with individuals who disregard conventional logic, probability, or strategic reasoning. Subject appears particularly affected when opponents "make no sense."

Final Attempt

Maintains continued engagement following unsuccessful outcomes, frequently initiating additional attempts under the designation of "final." Repeated use of this designation has raised concerns regarding its operational validity.

THREAT ASSESSMENT

ANALYST'S NOTE

Subject demonstrates a highly developed capacity for verbal persuasion, supported by rapid reasoning, adaptive communication, and an unusually high tolerance for prolonged conversation. Subject appears particularly effective when allowed sufficient time to establish conversational momentum.

Subject routinely anticipates objections and adjusts arguments accordingly, demonstrating potential applications in negotiation, sales, and psychological operations. Subject has also demonstrated a consistent ability to introduce additional supporting points whenever the opposing party appears close to reaching a decision.

Subject's effectiveness appears to increase when challenged, with resistance frequently interpreted as an invitation to provide further explanation. The subject may continue refining an argument well beyond the point at which a reasonable conclusion has already been reached.

Conclusion: Subject presents limited physical threat under normal conditions. Personnel are advised to exercise caution during prolonged verbal engagements. The safest course of action may be to agree before the second supporting argument.

PSYCHOLOGICAL ANALYSIS

Social Profile

Naturally outgoing and comfortable around new people. Subject enjoys making connections, but access to the inner circle remains highly selective. Everyone gets a conversation; very few get the trust.

Self-Perception

ENTP-A. Highly confident in personal ability, communication skills, experience, and logic. Confidence appears to be a stable trait and may occasionally exceed the recommended operating limit.

Personal Preferences

Red. Black. Denim. Sneakers. Attractive women. Comfort above unnecessary fashion rules. Subject appears to consider "looks good and feels comfortable" a sufficiently complete style philosophy.

Behavioral Anomalies

When entering unfamiliar accommodation, Subject may deploy towels across the floor to avoid direct foot contact. Under the influence of alcohol, Subject's communication network expands unpredictably - with one notable exception: romantic partners may receive no response whatsoever.

Emotional Vulnerability

Subject demonstrates strong resistance to conventional persuasion. However, this resistance decreases substantially when a close family member or romantic partner becomes ill or visibly distressed. Under such conditions, subject's decision-making capacity becomes significantly compromised, and previously established rules may be considered temporarily negotiable.

Documentation Tolerance

Subject demonstrates limited tolerance for excessive written material. Operational documents are recommended to contain only essential requirements; unnecessary procedural detail may result in immediate disengagement.

Operational Efficiency

Prefers clearly defined objectives over prescribed procedures. Subject routinely develops independent methods to achieve required outcomes with minimal unnecessary steps.

CONCLUSION

Subject demonstrates high confidence, strong social adaptability, and exceptional verbal persuasion. Prefers clearly defined objectives over prescribed procedures and routinely develops independent methods to achieve results efficiently. Subject has limited tolerance for excessive documentation; operational materials should remain concise and requirement-focused. Despite strong resistance to conventional persuasion, Subject becomes significantly more vulnerable when close family members or a romantic partner are crying or unwell. Under such conditions, previously established rules may become temporarily negotiable.
